Portfolio Project – Form Validation

Overview

In the last session we learnt about the required attribute, submit inputs and form tags. In this challenge we will be adding these features to our contact form.

Goals

1. **Requiring user inputs:** Our goal is to add basic requirements and validations when submitting our form. Using what we've learnt we can direct the browser to validate our forms and give feedback to the user.

Specifications

Add the following to your contact form:

- The following fields need to be required:
    - o Email
    - o Message
- Wrap your form in <form> tags
    - o Further reading: https://developer.mozilla.org/en-US/docs/Web/HTML/Element/form
- In order to submit the form you'll need to use a submit input:
    - o Further Reading:
      https://developer.mozilla.org/en-US/docs/Web/HTML/Element/input/submit
- If a user hasn't filled in a required field the browser should highlight the field and tell them what went wrong
